AUTHOR: Sladek, A., Master of Engineering, Director of Zaklady Koksochemiczne "Blachownia"

TITLE: Achievements of the Zaklady Koksochemiczne "Blachownia" ("Blachownia" Coal-Tar Chemical Plant)

PERIODICAL: Przeglad techniczny, no. 25, 1962, 11

TEXT: The enterprise consists of the following production facilities: two plant units for continuous distillation of benzol, including rectification and refining; two plant units for continuous distillation of coal tar; facilities for the production of coumarone resins, anthracene and hard pitch. Recent technological improvements in the continuous distillation of coal tar helped to increase the output of naphthalene by 40 percent. This was primarily achieved by direct isolation through distillation of the naphthalene fraction at 80 percent concentration of the pure component. Modification in the processing of benzol also resulted in higher outputs. Further expansion of the plant is anticipated. Future facilities will include an installation for pyrolysis of benzines, including the processing of pyrolytic gases. The obtained ethylene is to be used for producing polyethylene and ethylbenzene. Expansion and further development are expected to contribute considerably to the national economy. No references or illustrations.

✓ Sládek, Jaroslav. *Thermická kontinentalita podnebí v Československu.* [Thermal continentality of the Climate of Czechoslovakia.] Meteorologické Zprávy, Prague, 8(4):85-93, Aug. 1955. 5 figs., 2 tables, 21 refs. Russian and German summaries p. 85. DWB—An index of continentality (K) was advanced by N. N. IVANOV in 1953 (see item 6.3-338, March 1955, *MAB*); $K = A_1 - A_0$, where A_1 is the yearly amplitude of atmospheric temperature at a given place and A_0 is the temperature amplitude for the entire latitude corresponding to that place. Positive values indicate continental and negative values indicate maritime climate. Data on temperature variations are presented for over 150 stations in Czechoslovakia and maps are drawn with isolines of continentality. Eastern Slovakia is situated around the zero isoline and values of continentality become increasingly negative to the west. The results are compared with those obtained with GORCZYNSKI's method of thermal continentality classification. *Subject Headings:* 1. Thermal continentality. 2. Czechoslovakia.—G.T.

TITLE: Variations in quantitative characteristics of the cock of Tetrao Urogallus L. in Western Carpathian Mountains, and remarks relating to their taxonomical evaluation

SOURCE: Biologia, no. 7, 1964, 504-521

TOPIC TAGS: ornithology, animal classification, ecology, zoology, bionomics

Abstract: The author measured characteristic features of freshly shot cocks during the period 1956 - 1962. The weight, length of wings, length of tail, number of feathers in the tail, length and width of the beak were noted. It is deduced that the species living in the Western Carpathian mountains is T. u. major and not T. u. rudolfi, as is maintained by some Russian and Polish ornithologists. The birds in the area are isolated geographically.

"The Lynx - *Lynx lynx* (Linne 1758) in Slovakia."

Bratislava, Biologia, Vol 18, No 6, 1963; pp 464-469.

Abstract [German summary modified]: After the war, the European bobcat became much more frequent in the Carpathian mountains but since it is a trophy game, data about its strains is difficult to obtain. From study of 40 skulls collected and some skins examined since 1950, authors conclude that Slovakia harbors mostly the larger Northern variety (*L. l. lynx*) and the Caucasian one (*L. l. orientalis*) but not the smaller Southern European one (*L. l. pardina*); possibly another isolated indigenous subspecies is also present. Table, 2 photographs; 7 Western and 3 Soviet references.

TITLE: [A transistorized switch] CZ Pat. No. PV 5887-64

SOURCE: Vynalezy, no. 1, 1966, 11

TOPIC TAGS: switching circuit, switching theory, transistorized circuit, RESISTANCE
GRID GE

ABSTRACT: A transistorized circuit controlled by a reverse bridge is described which has the distinguishing feature that between the bases of the switch transistors and their collectors, or between the bases and their emitters, is connected the output of the reverse resistance bridge constituted by resistances. The bridge is connected to a source of direct current ungrounded voltage and at the same time one resistance of the bridge is shunted by a control transistor between the base and emitter of which, or the base and the collector is connected to the secondary winding of the transformer, while the primary winding is connected to the source of the control pulses.

THE RESPONSE OF ADRENAL GLAND OF INFANTILE RATS TO STRESS EFFECTS OF X-RADIATIONS.
S. Radivojević, Miroslav R. Djordjević, and Dusanica V. Radivojević

Jeviš, Bull. Inst. Nuklearne Fizike, Sol. "Boris Kidrich" (Belgrade) 6, 199-202 (1956) Mar.

New born rats up to 10 days of age do not react to stress effected by x rays. Fall in concentration of cholesterol, 3 hrs following x ray radiation, was observed for the first time in animals 10 days old. Under our experimental conditions, adrenal ascorbic acid content begins to fall only in older infant rats i.e. after 13 days of age. Furthermore, this decline was gradual and paralleling the age. An exposure of animals to the same experimental conditions causes a different adrenal response with respect to adrenal ascorbic acid and cholesterol in animals 10 to 13 days old. (subh)

"Storage of Vitamin A in Newborn Chickens."

Prague, Ceskoslovenska Fysiologie, Vol 15, No 5, Sep 66, pp 373 - 374

Abstract: The chickens were given a massive dose of vitamin A scaled in a geometric proportion between 500 and 32000 int. units. They were fed for 36 hours ad libitum, then starved for 12 hours, then killed and the content of vitamin A determined. The amount of the vitamin found corresponded to the logarithm of the administered dose. 59% of the vitamin was stored in the liver. 1 Figure, no references. Submitted at 3 Days of Physiology of Domestic Animals at Liblice, 9 Dec 65.

"The Influence of Varying Levels of Proteins in the Diet on the Exhaustion of Stored Vitamin A."

Prague, Ceskoslovenska Fysiologie, Vol 15, No 5, Sep 66, p 374

Abstract: Experiments were conducted on chickens 1 to 20 days old. The chickens received a massive dose of vitamin A and then were fed for 20 days with the same amount of food, but with varying amounts of proteins. One kind of food contained 26% N substances, the other only 13%. No difference in the amount of vitamin A stored in the body was found between the two groups. No references. Submitted at 3 Days of Physiology of Domestic Animals at Liblice, 9 Dec 65.

"Attempted Treatment of Polyneuritic Complications in Diabetes with Thiocctic Acid."

Warsaw, Polski Tygodnik Lekarski, Vol. 18, No. 1, 1 Jan 63, pp 16-18

Abstract: / Authors' English summary modified / Reference is made to previously reported successful use of thiocctic acid in the treatment of polyneuritic complications in the course of diabetes. The authors report nine cases of diabetic polyneuropathy treated with this drug. The clinical analysis deals with only 7 cases, in which polyneuropathy was not complicated by geriatric changes. The drug was given twice per 24 hrs. each dose of 20mg. was injected intramuscularly. The drug was administered for two weeks. In 5 patients the pains disappeared, however in 2 of them they recurred after some time. The authors consider the drug effective, however the treatment should probably be continued with small sustaining doses. The authors cite four references. One of the references is Polish.
